•	THIS MONTH IN ANESTHESIOLOGY	9A
\Diamond	EDITORIAL VIEWS	
CME	Risk Stratification, Risk Adjustment, and Other Risks Fredrick K. Orkin	1001
CMB	Risk Stratification Index: An Important Advance in Comparing Health Care Apples to Oranges Norman A. Cohen and Alexander A. Hannenberg	1004
	This Is No Humbug: Anesthetic Agent-induced Unconsciousness and Sleep Are Visibly Different Nancy L. Chamberlin and Matthias Eikermann	1007
	Neostigmine <i>versus</i> Sugammadex: Which, When, and How Much? Aaron F. Kopman	1010
	Is There Transfusion-related Acute Renal Injury? Beth H. Shaz and Christopher D. Hillyer	1012
	Femoral Nerve Block for Analgesia in Patients Having Knee Arthroplasty Admir Hadzic, Timothy T. Houle, Xavier Capdevila, and Brian M. Ilfeld	1014
	Active, Personalized, and Balanced Coagulation Management Saves Lives in Patients with Massive Bleeding Michael T. Ganter and Donat R. Spahn	1016
	SPECIAL ARTICLES	
	Frank J. Murphy, M.D., C.M., 1900–1972: His Life, Career, and the Murphy Eye John E. Forestner Around 1940, Frank J. Murphy added the "Murphy eye" to the endotracheal tube to decrease the risk of airway occlusion under anesthesia. National standards and regulation of the specialty greatly affected Murphy's career after World War II.	1019
	PERIOPERATIVE MEDICINE	
•	Broadly Applicable Risk Stratification System for Predicting Duration of Hospitalization and Mortality Daniel I. Sessler, Jeffrey C. Sigl, Paul J. Manberg, Scott D. Kelley, Armin Schubert, and Nassib G. Chamoun The authors developed broadly applicable and robust risk-stratification systems for assessing hospital length of stay and mortality for surgical patients based solely on administrative data. SUPPLEMENTAL DIGITAL CONTENT IS AVAILABLE IN THE TEXT	1026

•	Breakdown of within- and between-network Resting State Functional Magnetic	
	Resonance Imaging Connectivity during Propofol-induced Loss of Consciousness Pierre Boveroux, Audrey Vanhaudenhuyse, Marie-Aurélie Bruno, Quentin Noirhomme, Ir., Séverine Lauwick André Luxen, Christian Degueldre, Ir., Alain Plenevaux, Caroline Schnakers, Christophe Phillips, Ir., Jean-François Brichant, Vincent Bonhomme, Pierre Maquet, Michael D. Greicius, Steven Laureys, and Mélanie Boly Using resting-state functional magnetic resonance imaging connectivity analyses, the authors show that propofol-induced unconsciousness is associated with a marked disorganization of spontaneous brain activity temporal architecture, predominant in higher-order frontoparietal cortices. SUPPLEMENTAL DIGITAL CONTENT IS AVAILABLE IN THE TEXT	1038
♦	Sugammadex and Neostigmine Dose-finding Study for Reversal of Shallow	
	Residual Neuromuscular Block Stefan J. Schaller, Heidrun Fink, Kurt Ulm, and Manfred Blobner Sugammadex, 0.22 mg/kg, and neostigmine, 34 µg/kg, are able to accelerate the recovery from train-of-four	1054
	ratio of 0.5 to 0.9 or higher in an average of 2 min, or within 5 min for 95% of all treated patients.	
\Diamond	γ -Aminobutyric Acid Type A Receptor Inverse Agonist L-655,708 Bechara J. Saab, Ashley J. B. MacLean, Marijana Kanisek, Agnieszka A. Zurek, Loren J. Martin, John C. Roder, and Beverley A. Orser Postanesthetic memory deficits represent an undesirable and poorly understood adverse effect of general anesthetics. Anesthetics modulate γ -aminobutyric acid (GABA) receptors and the inhibitory α 5 subunit—containing GABA subtype A receptors (α 5GABA _A) are known to play a critical role in memory processes. The authors hypothesized that inhibiting the activity of α 5GABA _A receptors during isoflurane anesthesia would prevent memory deficits after anesthetic exposure in mice. Mice were conditioned in fear-associated contextual and cued learning paradigms including freezing behavior. After anesthetic exposure, a robust deficit in contextual fear memory persisted for at least 24 h. The α 5GABA _A receptor inverse agonist, L-655,708, completely prevented memory deficits without changing the immobilizing dose of isoflurane. This study suggests an isoflurane interaction at α 5GABA _A receptors may contribute to memory impairment during the early postanesthesia period in patients.	1061
	Does Central Venous Oxygen Saturation-directed Fluid Therapy Affect	
	Postoperative Morbidity after Colorectal Surgery? A Randomized Assessor-blinded Controlled Trial Ib Jammer, Atle Ulvik, Christian Erichsen, Olav Lødemel, and Gro Østgaard Patients ($n=241$) scheduled for bowel surgery were randomly assigned to receive fluid therapy following a traditional fluid scheme or aimed at $Scvo_2$ of at least 75%. Postoperative complications occurred in 42% of the patients in both groups.	1072
	Brain Networks Maintain a Scale-free Organization across Consciousness, Anesthesia, and Recovery: Evidence for Adaptive Reconfiguration UnCheol Lee, GabJin Oh, Seunghwan Kim, GyuJung Noh, ByungMoon Choi, and George A. Mashour The induction of general anesthesia is associated with numerous local changes in the temporal organization of neural networks, but a global order persists.	1081
	Hydroxyethyl Starch 6% (130/0.4) Ameliorates Acute Lung Injury in Swine	
	Hemorrhagic Shock Xanthippi Balkamou, Theodoros Xanthos, Konstantinos Stroumpoulis, Dimitrios-Anestis Moutzouris, Georgios Rokas, Georgios Agrogiannis, Theano Demestiha, Efstathios Patsouris, and Lila Papadimitriou The current experimental data indicate that resuscitation after hemorrhagic shock with hydroxyethyl starch led to less edema and less microvascular permeability in swine lungs.	1092
	Lower Isoflurane Concentration Affects Spatial Learning and Neurodegeneration in Adult Mice Compared with Higher Concentrations Ana M. Valentim, Pierpaolo Di Giminiani, Patrícia O. Ribeiro, Paula Rodrigues, I. Anna S. Olsson,	1099
	and Luís M. Antunes Concerns regarding the effects that anesthesia may have in the brain are increasing. With an interdisciplinary approach (behavior and histopathology), this work reports on the influence of different isoflurane concentrations in adult mice.

S I E I	Intrathecal Injection of Hepatocyte Growth Factor Gene-modified Marrow Stromal Cells Attenuates Neurologic Injury Induced by Transient Spinal Cord Ischemia in Rabbits Enyi Shi, Xiaojing Jiang, Lingling Wang, Satoshi Akuzawa, Yoshiki Nakajima, and Teruhisa Kazui Prophylactic transplantation of hepatocyte growth factor gene-modified marrow stromal cells induced powerful neuroprotective effects against ischemia-reperfusion injury in spinal cords and was more therapeutically efficient than transplantation of marrow stromal cells only.	
	Effect of Anesthetic Technique on Serum Vascular Endothelial Growth Factor C and Transforming Growth Factor β in Women Undergoing Anesthesia and Surgery for Breast Cancer Micheal Looney, Peter Doran, and Donal J. Buggy In this randomized controlled trial of women with primary breast cancer undergoing surgery, anesthetic technique was found to influence serum concentrations of factors associated with angiogenesis, a prerequisite of metastases.	1118
	CRITICAL CARE MEDICINE	
\(\)	Does Erythrocyte Blood Transfusion Prevent Acute Kidney Injury? Propensity-matched Case Control Analysis Milo Engoren In acute lung injury, the use of erythrocyte blood transfusions has no effect on the subsequent rise in serum creatinine or the incidence of acute kidney injury.	1126
	Critical Role of the Small GTPase RhoA in the Development of Pulmonary Edema Induced by <i>Pseudomonas aeruginosa</i> in Mice Michel Carles, Mathieu Lafargue, Arnaud Goolaerts, Jérémie Roux, Yuanlin Song, Marybeth Howard, David Weston, John T. Swindle, Joe Hedgpeth, Fanny Burel-Vandenbos, and Jean-Francois Pittet <i>The small GTPase RhoA plays a critical role in mediating lung injury associated with</i> Pseudomonas aeruginosa <i>pneumonia in mice. Blocking RhoA signaling could attenuate lung damage caused by</i> P. aeruginosa <i>in critically ill patients. SUPPLEMENTAL DIGITAL CONTENT IS AVAILABLE IN THE TEXT</i>	1134
	PAIN MEDICINE	
•	Femoral Nerve Block Improves Analgesia Outcomes after Total Knee Arthroplasty: A Meta-analysis of Randomized Controlled Trials James E. Paul, Aman Arya, Lindsay Hurlburt, Ji Cheng, Lehana Thabane, Antonella Tidy, and Yamini Murthy Single-shot femoral nerve block is a good alternative for postoperative analgesia for patients having total knee arthroplasty and the addition of either a continuous femoral nerve block or sciatic nerve block requires further study.	1144
	Purinergic P2X Receptor Regulates N-Methyl-D-aspartate Receptor Expression and Synaptic Excitatory Amino Acid Concentration in Morphine-tolerant Rats Yueh-Hua Tai, Pao-Yun Cheng, Ru-Yin Tsai, Yuh-Fung Chen, and Chih-Shung Wong Treatment of rodents with a P2X receptor antagonist diminished opioid tolerance in part by down-regulating glutamate receptors and inhibiting excitatory amino acid release.	1163
	Disrupted Sleep and Delayed Recovery from Chronic Peripheral Neuropathy Are Distinct Phenotypes in a Rat Model of Metabolic Syndrome Aaron R. Muncey, Adam R. Saulles, Lauren G. Koch, Steven L. Britton, Helen A. Baghdoyan, and Ralph Lydic Rats selectively bred for low intrinsic aerobic capacity develop metabolic syndrome with phenotypes of disordered sleep and enhanced nociception homologous to traits observed in obese humans.	1176

Evaluation of Pregabalin as an Adjuvant to Patient-controlled Epidural Analgesia during Late Termination of Pregnancy Patricia M. Lavand'homme and Fabienne Roelants Oral pregabalin 150 mg/12 h is a helpful adjuvant to epidural analgesia during late termination of pregnancy. Modulation of both the visceral sensitization and the affective component of pain may contribute to the benefits observed.	1186
EDUCATION	
CASE SCENARIO Emergency Reversal of Oral Anticoagulation Aristides Koutrouvelis, Amr Abouleish, Alexander Indrikovs, and Jack Alperin	1192

ANESTHESIA LITERATURE REVIEW	1199
REVIEW ARTICLES ◆ Pathophysiology and Treatment of Coagulopathy in Massive Hemorrhage and Hemodilution Daniel Bolliger, Klaus Görlinger, and Kenichi A. Tanaka Coagulopathy after major surgery or trauma is of multifactorial nature affecting procoagulant as well as anticoagulant, profibrinolytic, and antifibrinolytic elements. Profound understanding of pathophysiological changes in coagulation is essential to optimally manage hemostatic therapies.	1205
Minimally Invasive Measurement of Cardiac Output during Surgery and Critical Care: A Meta-analysis of Accuracy and Precision Philip J. Peyton and Simon W. Chong A review of the accuracy and precision of four methods for minimally invasive cardiac output measurement shows that the limits of agreement with thermodilution lie well outside the suggested 30% limits.	1220
CLINICAL CONCEPTS AND COMMENTARY Regional Anesthesia and Eye Surgery Emmanuel Nouvellon, Philippe Cuvillon, and Jacques Ripart Changes in surgical techniques and research aimed at improved safety have resulted in the development of alternative, nonakinesia techniques, such as sub-Tenon block or topical anesthesia. SUPPLEMENTAL DIGITAL CONTENT IS AVAILABLE IN THE TEXT	1236

INSTRUCTIONS FOR AUTHORS

The most recently updated version of the Instructions for Authors is available at www.anesthesiology.org. Please refer to the Instructions for the preparation of any material for submission to Anesthesiology.

Manuscripts submitted for consideration for publication must be submitted in electronic format. The preferred method is *via* the Journal's Web site (http://www.anesthesiology.org). Detailed directions for submissions and the most recent version of the Instructions for Authors can be found on the Web site (http://www.anesthesiology.org). Books and educational materials should be sent to Michael J. Avram, Ph.D., Department of Anesthesiology, Northwestern University Feinberg School of Medicine, Ward Memorial Building, Room 13-199, 303 East Chicago Avenue, Chicago, IL 60611-3008. Requests for permission to duplicate materials published in ANESTHESIOLOGY should be submitted in electronic format, to the Permissions Department (journalpermissions@lww.com). All articles accepted for publication are done so with the understanding that they are contributed exclusively to this Journal and become the property of the American Society of Anesthesiologists, Inc. Statements or opinions expressed in the Journal reflect the views of the author(s) and do not represent official policy of the American Society of Anesthesiologists unless so stated. Advertising and related correspondence should be addressed to Advertising Manager, Anesthesiology, Lippincott Williams & Wilkins, Two Commerce Square, 2001 Market Street, Philadelphia, Pennsylvania 19103 (Web site: http://www.lww.com/advertisingratecards/).
