believe that decision makers could specify a lower threshold of negative predictive value that would justify the use of universal airborne precautions, irrespective of preoperative test results: given the relatively fixed characteristics of the reverse transcription polymerase chain reaction test, any such change would be driven by estimates of population prevalence. As a specialty, we should engage in a continuous, transparent process of adapting these policies in collaboration with other leaders and stakeholders in the context of new information.

An Online Educational Platform in the COVID-19 Pandemic

To the Editor:

We bring to your attention the unique features of our specialized departmental coronavirus disease 2019 (COVID-19) website, purpose-built to disseminate training resources; particularly highlighting the clarity of the structure and infographics, as well as the efficiency and acuity required to ensure accuracy. The benefit of having an online educational platform during the COVID-19 pandemic has been previously reported.[1] At the start of the pandemic in the United Kingdom, our anesthesia and intensive care (usually separate) departments merged. Our preexisting anesthesia website (https://rfanaesthesia.org) was rapidly adapted to include a COVID-19 page with contributions from experts in both specialties.

Clinical guidelines are displayed in sections of anesthesia, intensive care, and obstetrics, including information for non-medical staff. Infographics are used to facilitate quick review, either by carousel (*e.g.*, adult advanced life support, COVID-19 intubation guidance), or one-click access icons (*e.g.*, COVID-19 ventilation strategy). The training section includes several video demonstrations and specific cross-training resources for non-anesthesiologists and nonintensivists. A detailed communications section highlights the most efficient contact pathways between teams

in different areas of the hospital. The staff wellbeing section covers information on physical, emotional, and psychologic support.

In order to remain current, the website is maintained daily by an attending (M.J.C.) and a resident (L.L.Y.), with updates logged in a spreadsheet (private access only). Since the declaration of the COVID-19 pandemic, our website has had 5,607 page views worldwide, thus demonstrating this to be an invaluable resource for all members of the multidisciplinary team.
